# Align Technology Presents **The Platinum Series** By Dr. Willy Dayan

A Comprehensive A-to-Z Course in Aligner Orthodontics

#### Dr. Willy Dayan has been utilizing Invisalign in his practice for over 20 years, and has been in practice for over 30 years. He is an Elite Provider for Invisalign, as well as a registered speaker for Align.

Dr Dayan uses the Invisalign system to correct all forms of malocclusions. In addition to his orthodontic training, Dr. Dayan studied at the Pankey Institute, and is very involved in treating many combined cases requiring pre-prosthetic and prerestorative orthodontics.

The objective of orthodontic treatment does not change depending on the method. This does not mean that the biomechanics for the different appliances systems are all the same. Depending on the appliance system chosen by the patient and clinician, both the order of orthodontic movements and the biomechanics in operations could be different. Still, the objectives remain the same!

Dr. Dayan teaches how to take advantage of the special characteristics of aligners and how to use the ClinCheck Treatment Plan Software to carefully manage and control Orthodontic treatment for all patients in all dimensions. Learn how to solve every malocclusion with aligners.

# **Sessions:**

- February 26 Aligner Bio-Mechanics and Case Selection: The Paradigm Shift
- April 1

Vertical Control: Solving the Deepbite and the Openbite Malocclusions

• June 3

Sagittal Control: Solving the Class II and Class III Discrepancies

August 12

Root Movements: Labial and Lingual Torque, Mesial and Distal Root Tipping and Bicuspid Extractions

October 21

Canted Occlusal Planes, Surgical Cases, Troubleshooting, Missing Teeth, Live Coaching and Much More

The Platinum Series is a continuous series of 3-hour sessions over the span of a year.

orthodontist to know which cases will treat faster and better with aligners. Learn how to recognize and focus on those cases that are in the best interest of the orthodontist and patient to have done with aligners. As we review these cases, we will review Invisalign Bio-mechanics and how to set-up the ClinCheck and customize your aligners to treat these types of cases.
<b>: Solving the</b> <b>Deenbite</b> <b>Control Vertical Dimension in Aligners:</b> As an orthodontist plans the correction of an individual patient's malocclusion, controlling the vertical dimension of the patient is of paramount importance. Depending on how the ClinCheck is modified and how the curve of spee is manipulated, one can open deepbites or close anterior openbites; we can reduce face heights or increase face heights. It's all in the control of the orthodontist.

ts: Labial que, Root uspidLearn How to Control Difficult Root Movements in Aligners: Moving only the crowns of teeth is not the art of stable and sound orthodontics. Controlling roots of teeth in situations that require great deals of labial or lingual torque, or mesial and distal root tipping control is the most challenging lessons in aligner bio-mechanics.
I Planes, gical Cases, g, Missing loreLearn How to Think Out of the Box with Aligners: As an orthodontist plans the correction of an individual patient's malocclusion, we meet many situations where patients require our services and we know that the ideal results will be impossible or very difficult to achieve. At the same time these patients do need our services. Learn how to use aligners in these situations to achieve results in ways that are often better and faster than traditional orthodontics.
